PARTIAL VIEW OF MY FIELDS

THE MODERN GLADIOLUS

Many people are taking up Gladiolus growing as a hobby. And a delightful hobby it is! To watch, for the first time, the unfolding of a new variety is to the real flower lover a quite thrilling event.

And do you know that a vase of Gladiolus will retain its beauty for more than a week, if the water is changed daily, and a half-inch or more cut off the bottom of the stems?

Remember, too, that an investment in these bulbs will not only give you pleasure this year, but for **years to come**.

A wonderful improvement has been made in the Gladiolus during the last few years. Those who are acquainted only with the old red spikes which grew in Grandmother's garden will hardly recognize it as they gaze on the large and gorgeous flowers of the modern hybrids which are the result of thousands of crosses made by specialists in this line. The newer kinds embrace many varieties producing from 12 to 20 blooms on a single spike, many of which will measure from four to six inches across. Nearly all the colors of the rainbow may now be found. The combinations of colors and beautiful markings of the petals and throat cannot be surpassed by any other flower. As sturdy as the lily and as exquisite as the expensive orchid it may be grown successfully by the amateur in any ordinary garden, and if several plantings are made in the spring at different times, bloom may be had from the end of July until frost. Covering the widest range of color from the brightest, blood-red scarlet, deep purple and rich carmine shades to the most delicate tints of white, pink, yellow and lavender, they prove at once the most showy and attractive of garden flowers. They are rightly called "The People's Orchid." There is no easier flower to grow. No other flower gives so much satisfaction at small expense. If you have never planted any of the newer varieties such as are offered you in this booklet, give them a trial. They will be a delight to the eye and a joy to the soul.

On account of its good keeping qualities the Gladiolus surpasses all other flowers for cutting purposes, and in order to obtain the utmost pleasure from the blooms you should place them in vases in the house. The Gladiolus is particularly adapted to table decoration. Cut the spike in the morning or evening when the first bud opens, leaving at least four leaves on the plant to mature the bulb. Change the water daily, remove the withered portions, and cut (on a slant) an inch or so from the end of each stem. Every bud will open one by one to the very top, and a vase of blooms may be kept fresh and beautiful for a week or ten days.

PHOTO TAKEN IN ONE OF MY FIELDS. NOTICE THE TALL RANK GROWTH OF PLANTS, AND THE LARGE FLOWERS. THIS MEANS GOOD BULBS.

CULTURE

If you can grow potatoes you can grow Gladiolus. Plant in any good garden soil as soon as ground is workable up to the first of June. If several plantings are made at different times the season of bloom will be lengthened. Do *not* plant in shade of trees or buildings, and do not allow *fresh* manure to come in direct contact with bulbs. Use well-rotted manure, commercial fertilizer, wood ashes, or bone meal, well mixed with the soil. Set the bulbs five to six inches deep in rows and about three to four inches between each bulb. Rows about 18 inches apart. Or may be massed in beds about four inches apart each way. If planted in quantity and to be cultivated with a horse make rows 30 to 36 inches apart. Keep soil loose and free from weeds. When cutting flower spike let at least four leaves remain on the plant to allow the bulb to mature properly. Dig bulbs in the fall, cut off tops, and after drying in the open air for a few days store away in a dry, cool but frost proof place in the cellar.

YVONNE—A BEAUTIFUL NEAR WHITE

TIME REQUIRED TO BLOOM

The number of days required to bloom depends on the latitude, weather, kind of soil, size of bulbs, depth of planting, etc., so that I consider the tables given by some growers as unreliable. I prefer to class them as EE—extra early; E—early; EM—early medium; M—medium; LM—late medium; and L—late. An early variety will take about 70 to 75 days; medium, 85 days; and late, 95 days. These figures, however, are only approximate.

Good Garden Labels

may be made by planing lath to a smooth surface, cutting them into one-foot lengths, and sharpening. Dip the sharpened ends into wood preserver, paint the upper half white, and when dry paint the name on with a small camel's-hair artists brush, using black paint. Be careful not to let the paint lap on the wood preserver as wood preserver dissolves paint. Such labels will last for a number of years.

THE CROWD AT THE FLOWER BOOTH

VISITORS WELCOME AT BLOOMING TIME

The Gladiolus Fields are in bloom from August 1st to the late September frosts. New Lebanon is located in the beautiful Lebanon Valley on a fine concrete road, near the N. Y.-Mass. state line, 10 miles west of Pittsfield, Mass. and 25 miles south east of Albany, N. Y. Leave the concrete at Ward's Store, New Lebanon, and proceed north one short mile on an improved road (West St.) The last two weeks in August and the first week in September is the height of the blooming season. Exquisite blooms from choice varieties may be had for only 50c per doz.

TWILIGHT

Gorgeous as the clouds in sunset's rays;
Endowed with charming form and dainty

you Queen.—*Stanley Thorpe.*

There is a fascination in growing these flowers of unrivaled loveliness.

The sword-like foliage; the tall, upright stems clothed with flowers of exquisite beauty; the great variety of magnificent colors; the ease of culture; the sureness of bloom; and the lasting quality when cut—all combine to make the Gladiolus one of our most popular flowers.
